

Inventory Management

What Am I Going to do with All this Stuff?

Presented by
Andrew W. Repak,
CPA, CMA, CFM, VCO

FORUM2014

Logistics

- lo·gis·tics lə'jistik/, *noun*,
the detailed coordination of a complex operation involving many people, facilities, or supplies.
synonyms: organization, planning, plans, management, arrangement, administration, orchestration, coordination, execution, handling, running "the logistics of deploying forces in the field"

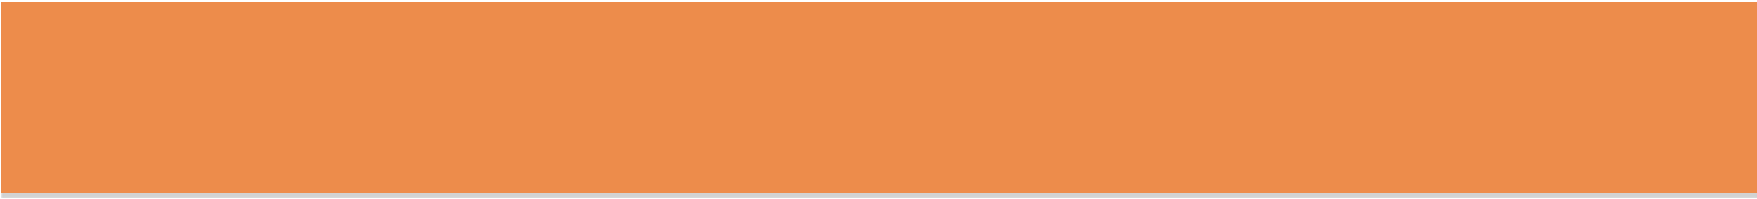

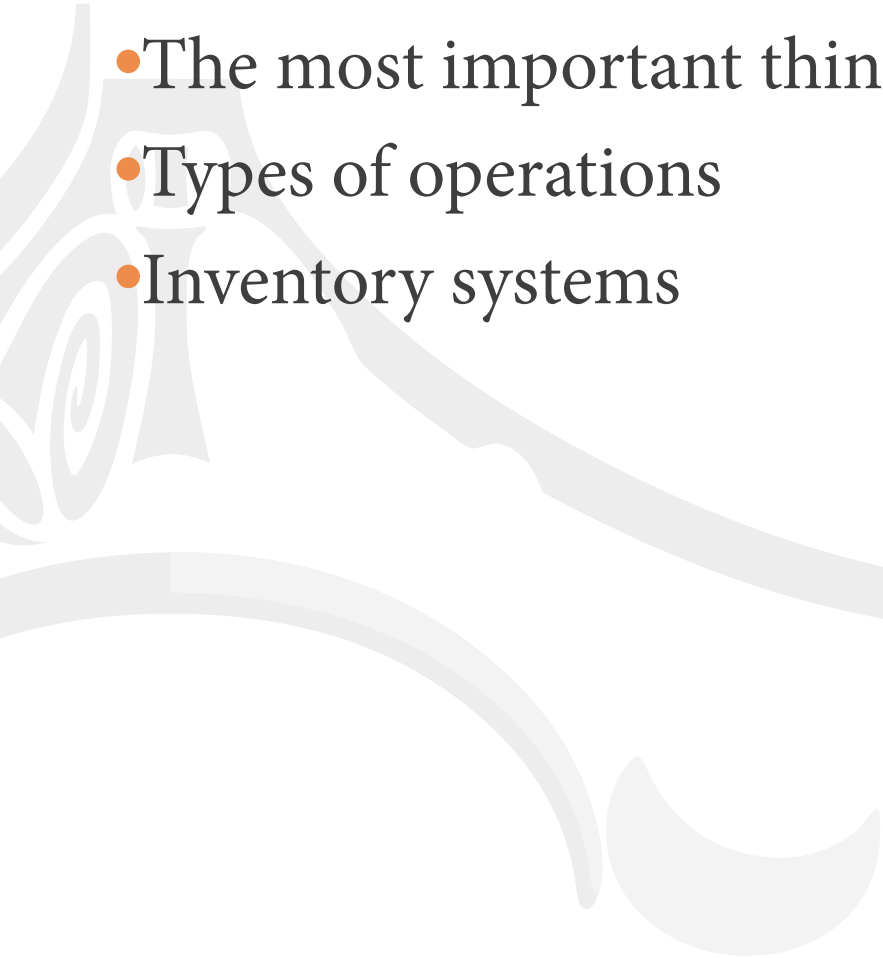

Department of Accounts (DOA) Guidance

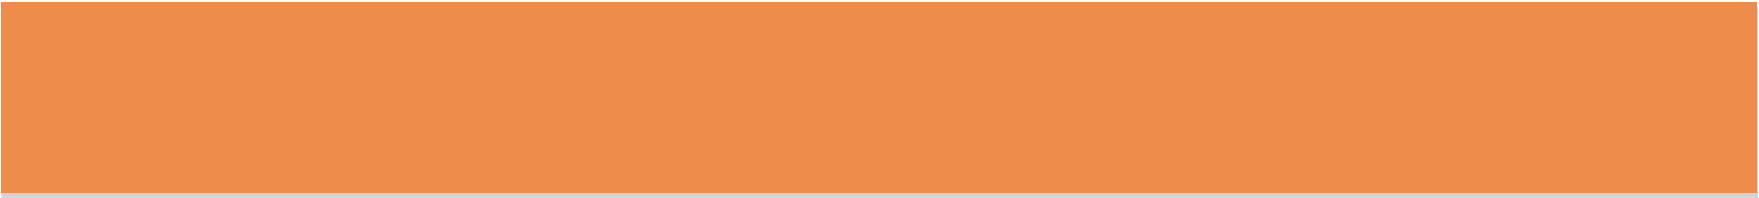

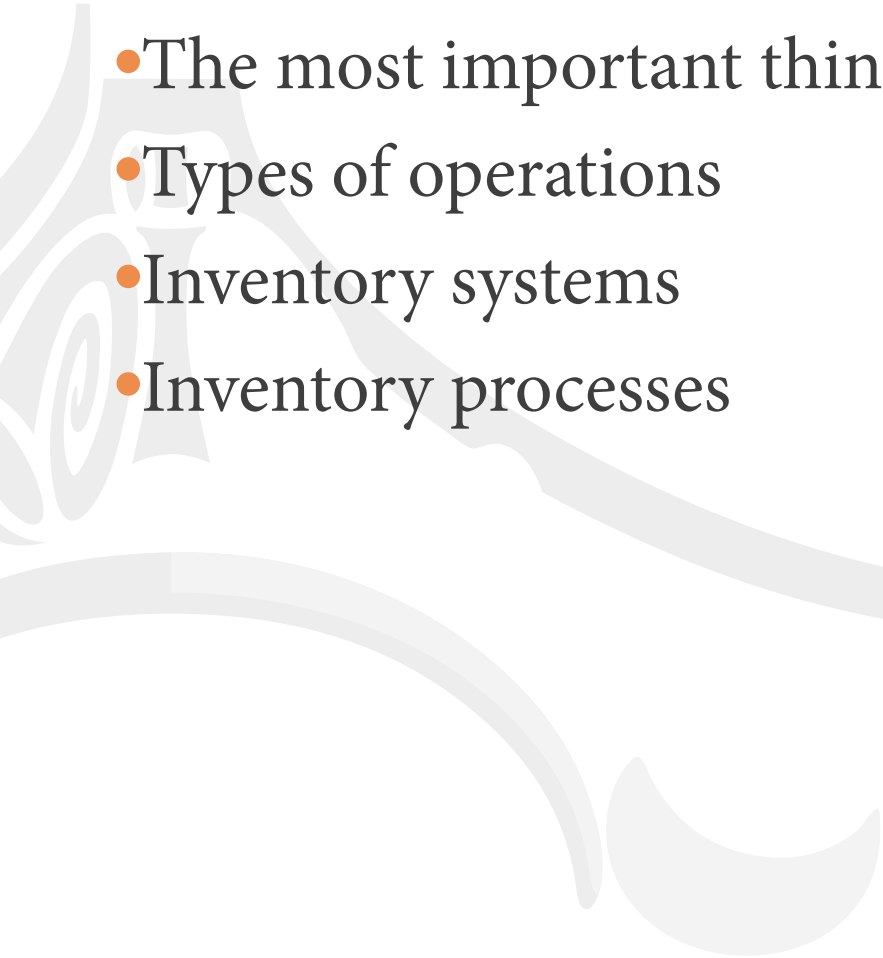

- Topic No. 30505, Physical Inventory
- Topic No. 30515, Supplies and Materials Inventory

Just In Time

Just In Time

- Inventory delivered right when it is needed.

Just In Time

- Inventory delivered right when it is needed.
- Good for manufacturing with a steady production with a very steady usage rate.

Just In Time

- Inventory delivered right when it is needed.
- Good for manufacturing with a steady production with a very steady usage rate.
- High quality usage with no mistakes.

Just In Time

- Inventory delivered right when it is needed.
- Good for manufacturing with a steady production with a very steady usage rate.
- High quality usage with no mistakes.
- Must establish a relationship with a select number of suppliers to make sure goods are definitely delivered on time.

Just In Time

- Inventory delivered right when it is needed.
- Good for manufacturing with a steady production with a very steady usage rate.
- High quality usage with no mistakes.
- Must establish a relationship with a select number of suppliers to make sure goods are definitely delivered on time.
- Cost of delivery will be higher due to more frequent deliveries

Just In Time

- Inventory delivered right when it is needed.
- Good for manufacturing with a steady production with a very steady usage rate.
- High quality usage with no mistakes.
- Must establish a relationship with a select number of suppliers to make sure goods are definitely delivered on time.
- Cost of delivery will be higher due to more frequent deliveries
- Less likely to be able to take advantage of bulk rates

Just In Time

- Inventory delivered right when it is needed.
- Good for manufacturing with a steady production with a very steady usage rate.
- High quality usage with no mistakes.
- Must establish a relationship with a select number of suppliers to make sure goods are definitely delivered on time.
- Cost of delivery will be higher due to more frequent deliveries
- Less likely to be able to take advantage of bulk rates
- Not appropriate for organizations required to receive three or more bids.

Performance Measurement

Performance Measurement

$$\text{Number of days In Inventory} = \frac{365}{\text{inventory turnover ratio}}$$

$$\text{Total Asset Turnover} = \frac{\text{sales}}{\text{total assets}}$$

$$\text{Working Capital Turnover} = \frac{\text{net sales}}{\text{average working capital}}$$

Performance Measurement

$$\begin{aligned} \text{Number of days In Inventory} &= \frac{365}{\text{inventory turnover ratio}} \\ \text{Current Ratio} &= \frac{\text{current assets}}{\text{current liabilities}} \\ \text{Total Asset Turnover} &= \frac{\text{sales}}{\text{total assets}} \\ \text{Acid Test (or Quick Ratio)} &= \frac{\text{cash} + \text{net rcvbls} + \text{mkt scrts}}{\text{current liabilities}} \\ \text{Working Capital Turnover} &= \frac{\text{net sales}}{\text{average working capital}} \end{aligned}$$

Performance Measurement

Number of days	=	$\frac{\text{Cost of Goods Sold}}{\text{average inventory}}$
Inventory Ratio	=	$\frac{\text{inventory}}{\text{net sales}}$
Receivable Ratio	=	$\frac{\text{new credits}}{\text{sales}}$
Turnover Ratio	=	$\frac{\text{avg current liabilities}}{\text{sales}}$
Number of Days	=	$\frac{\text{receivables}}{\text{total turnover ratio}}$
Acid Test	=	$\frac{\text{cash} + \text{net rcvbls} + \text{mkt scrts}}{\text{current liabilities}}$
(or Quick Ratio)	=	$\frac{\text{net sales}}{\text{average working capital}}$
Working Capital	=	
Turnover Ratio	=	

Performance Measurement

Number of days	=	$\frac{\text{Cost of Goods Sold}}{\text{average inventory}}$
Debt Capitalization	=	$\frac{\text{total liabilities}}{\text{total assets}}$
Receivable Ratio	=	$\frac{\text{net receivables}}{\text{total assets}}$
Profit Margin	=	$\frac{\text{avg net income}}{\text{total sales}}$
Number of Days On Sales	=	$\frac{\text{total assets}}{\text{net sales}}$
Return on Assets	=	$\frac{\text{receivable net income}}{\text{total assets}}$
Acid Test (or Quick Ratio)	=	$\frac{\text{cash} + \text{net rcvbls} + \text{mkt. serts}}{\text{current liabilities}}$
Working Capital	=	$\frac{\text{net sales}}{\text{total assets}}$
Equity Ratio	=	$\frac{\text{average total assets}}{\text{total assets}}$

Performance Measurement

Inventory Accuracy

Fill Rate

Inventory Turnover Ratio

Performance Measurement

Inventory Accuracy =

$$\frac{\text{pre-count inventory} - \text{the sum of the variances}^*}{\text{pre-count inventory}}$$

Note: the sum of the variances should be an absolute value

Performance Measurement

Fill Rate =

number of units correctly filled
number of units ordered

Performance Measurement

Inventory Turnover Ratio (Turn Rate) =

Cost of Goods Sold
average inventory

Performance Measurement

Inventory Turnover Ratio (Turn Rate) =

$$\frac{\text{beg inv} + \text{purchases} - \text{returns} - \text{end inv}}{\left(\frac{\text{beg inv} + \text{end inv}}{2} \right)}$$

Performance Measurement

Fill Rate vs. Turn Rate
